**New ImpactVizor Final Decisions View..... 1**

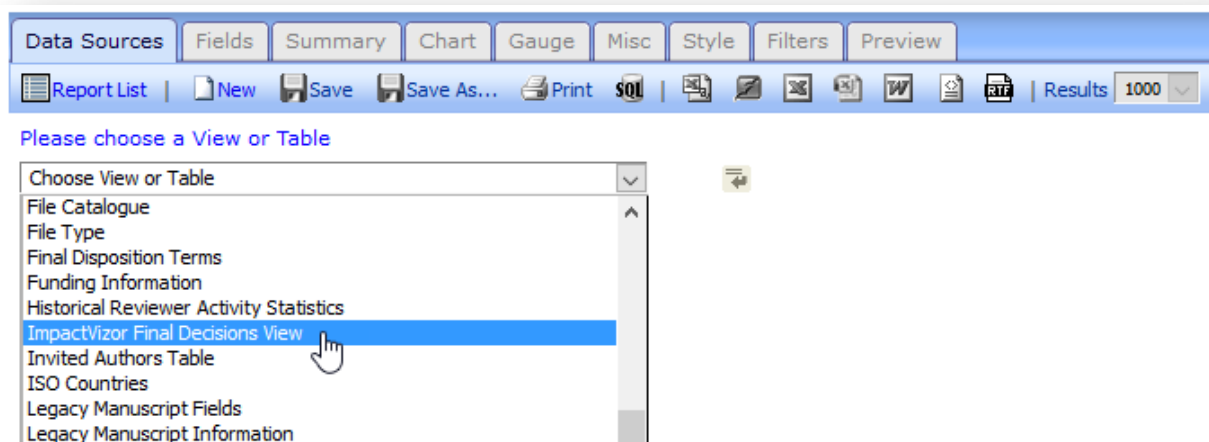

# New ImpactVizor Final Decisions View

ImpactVizor, a HighWire Press visual analytics tool, brings together citation and usage data from multiple sources and consolidates the data into configurable reports. One feature of ImpactVizor is the Rejected Article Tracker (RAT), which provides insight into rejected journal articles, including where they are eventually published and their citation rates.

In response to customer interest in the ImpactVizor product, EM version 13.1 adds a new single journal view called "ImpactVizor Final Decisions View" in order to provide data on rejected articles in the format required by the RAT. The "ImpactVizor Final Decisions View" displays all the information required by HighWire with field names that correspond to HighWire terminology.

The new view is not limited to displaying only submissions that have received a reject decision. (This is to ensure that the view can be used for other reports ImpactVizor may develop in the future.) Publications can use this view to create reports that are filtered to display only the papers required for the ImpactVizor RAT report.

The "ImpactVizor Final Decisions View" appears in the dropdown menu for creating a new report through both the Custom Report and Enterprise Analytics Reporting tools. After the user has run the report, the data can be downloaded into an Excel file and saved as a tab-delimited file to send to HighWire.

## TO CONFIGURE:

No configuration necessary. Users with the Produce Reports permission (in RoleManager) will see this new View.
